

AMENDMENTS TO THE CLAIMS

1. (Currently Amended) ~~Pliers~~ A pliers for cutting ~~plastic tubes, which have~~
comprising:

a first lever (1) and a second lever (2) articulated together on a pivot axis (3)
~~allowing them to be pivoted for pivoting~~ between an open position for receiving a tube
which is to be cut and a closed position ~~at the end of~~ after cutting, ~~first lever (1) being~~
~~provided with grooves (41, 42, 43) of different widths, each of which is intended for~~
~~receiving a tube of corresponding diameter, and wherein~~

the second lever (2) supporting includes a blade (5),

~~characterized by the first lever includes a wheel (4) rotatably mounted so~~
~~as to rotate on first lever (1), in the and having a periphery of which including grooves~~
having different widths for receiving tubes of different diameters (41, 42, 43) are
~~formed in such a way so that a groove selected according to the diameter of the a tube~~
to be cut can be placed opposite the blade (5) when the wheel (4) is turned to a
corresponding position.

2. (Currently Amended) ~~Pliers~~ The according to Claim 1, ~~characterized by the~~
~~fact that wherein the blade (5) has two successive cutting edges (51, 52) between~~
~~which are formed a point (53) is located.~~

3. (Currently Amended) ~~Pliers~~ The pliers according to Claim 1 ~~or 2,~~
~~characterized by the fact that wherein~~ the width of each of grooves ~~(41, 42, 43) is less~~
smaller than the diameter of the tube which ~~it the groove~~ is intended to receive.

4. (Currently Amended) ~~Pliers~~ The pliers according to ~~any one of Claims~~
Claim 1 to 3, characterized by the fact that including a shaft mounted on the first
lever, wherein the wheel (4) consists of includes two disks (44, 45) that are parallel to
one another and mounted so as to be axially distanced coaxially and spaced from one

another on the ~~same rotary~~ shaft (11) housed in first lever (1) rotary, the shaft (11) being ~~oriented~~ parallel to the pivot axis (3) of the first and second levers (1, 2).

5. (Currently Amended) ~~Pliers~~ The pliers according to Claim 4, ~~characterized by the fact that~~ wherein each disk (44, 45) has pins in the same number of pins (46) as the number of grooves (41, 42, 43), ~~the pins (46) being intended to cooperate~~ cooperating with two holes (12, 13) made in the first lever (1), ~~in order to mark~~ establish a stop position of the wheel (4) for each groove.

6. (Currently Amended) ~~Pliers~~ The pliers according to Claim 4, ~~characterized by the fact that~~ wherein

the first lever (1) has two branches (14, 15) between which the wheel (4) is rotatably mounted so as to rotate,

each of the two branches (14, 15) terminating, terminates beyond rotary the shaft (11) of the two disks (44, 45), in a branch end (16, 17) provided with including a hole (12, 13), and by the fact that

each disk (44, 45) is provided with includes pins in the same number of pins (46) as the grooves (41, 42, 43), where each pin (46) is intended to cooperate cooperating with a respective hole (12 or 13) of in a corresponding branch end (16 or 17) in order to mark establish a stop position of the wheel (4) for the selected a corresponding groove (41, 42 or 43).

7. (Currently Amended) ~~Pliers~~ The pliers according to ~~any one of Claims Claim 4 to 6, characterized by the fact that~~ wherein the disks (44, 45) are mounted on rotary the shaft (11) in such a way that they can be tilted slightly towards one another, against a return force.

8. (New) The pliers according to Claim 2, including a shaft mounted on the first lever, wherein the wheel includes two disks that are parallel to one another and

mounted coaxially and spaced from one another on the shaft, the shaft being parallel to the pivot axis of the first and second levers.

9. (New) The pliers according to Claim 8, wherein each disk has pins in the same number as the grooves, the pins cooperating with two holes in the first lever to establish a stop position of the wheel for each groove.

10. (New) The pliers according to Claim 8, wherein the first lever has two branches between which the wheel is rotatably mounted, each of the two branches terminates beyond the shaft of the two disks, in a branch end including a hole, and each disk includes pins in the same number as the grooves, each pin cooperating with a respective hole in a corresponding branch end to establish a stop position of the wheel for a corresponding groove.

11. (New) The pliers according to Claim 5, wherein the disks mounted on the shaft can be tilted towards one another, against a return force.

12. (New) The pliers according to Claim 6, wherein the disks mounted on the shaft can be tilted towards one another, against a return force.

13. (New) The pliers according to Claim 8, wherein the disks mounted on the shaft can be tilted towards one another, against a return force.
